

SAILUN ICE BLAZER WSTX

STUDDABLE PERFORMANCE WINTER TIRE PNEU D'HIVER DE PERFORMANCE POUVANT ÊTRE ÉQUIPÉ DE CRAMPONS

The WSTX is the latest addition to Sailun's Ice Blazer family line. A studdable winter tire that is designed for drivers that demand ultimate traction in all winter weather conditions. The modern WSTX design is engineered to give you maximum performance in slush, snow and icy conditions. Our specially formulated compound and polymer blends allow the tire to remain flexible for maximum performance and improves safety and handling. A proprietary blended Silica-Reinforced Formula provides excellent and reliable grip performance in low temperatures. The WSTX is designated with the 3PMSF Severe Service Emblem and is ideal for drivers in Canadian winter conditions.

Le tout nouveau WSTX est le plus récent modèle de la gamme Ice Blazer de Sailun. Il s'agit d'un pneu d'hiver pouvant être équipé de crampons conçu pour les conducteurs qui ont besoin d'une adhérence absolue dans toutes les conditions météorologiques hivernales. La conception moderne du WSTX est faite pour vous offrir des performances maximales dans la neige fondante, la neige et le verglas. Nos mélanges de composés spécialement formés et de polymères permettent au pneu de rester flexible pour offrir une excellente performance et améliorer la sécurité et la tenue de route du véhicule. Un mélange exclusif de formules renforcées de silice offre une adhérence excellente et fiable à des températures froides. Le WSTX arbore l'emblème de service intensif 3PMSF et est idéal pour les conducteurs dans les conditions hivernales canadiennes.

V-SHAPE TREAD BLOCKS

Staggered V-shape tread blocks for good stability and snow performance. The lateral grooves reduce sliding by quickly evacuating water and slush.

DIAGONAL 3D SIPING

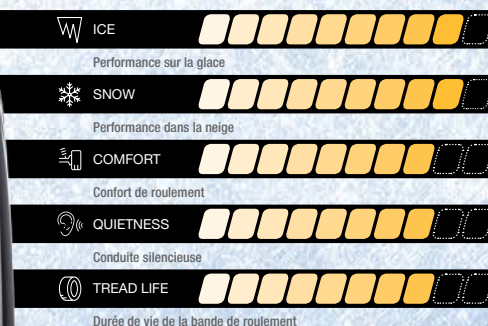

3D siping to better control pressure distribution and improve the tire's rigidity. It minimizes the tire deformation during driving and delivers better stability when braking and turning.

PAVÉS DE GOMME EN FORME DE V

Les pavés de gomme en forme de V décalés offrent une bonne stabilité et une excellente performance sur la neige. Les rainures latérales réduisent le glissement en évacuant rapidement l'eau et la neige fondante.

LAMELLES DIAGONALES 3D

Les lamelles 3D contrôlent mieux la répartition de la pression et améliorent la rigidité du pneu. Cela permet de minimiser la déformation du pneu pendant la conduite et d'offrir une meilleure stabilité lors des freinages et des virages.
